## Combinatória I: Lista 1

- 1. By defining, and calculating the expectation of, a suitable random variable, show that every graph G has a bipartite subgraph with at least e(G)/2 edges.
- 2. Show that  $R(3,4) \le 9$ ,  $R(4,4) \le 18$  and  $R(3,3,3) \le 17$ .
- 3. Show that every planar graph has chromatic number at most 6, and every triangle-free planar graph has chromatic number at most 4.
- 4. Show that if T is a tree with k vertices and G is a graph with minimum degree k-1, then  $T \subset G$ . Deduce that  $r(K_3, T) = 2k-1$ .
- 5. Show that every graph of average degree d contains a subgraph of minimum degree at least d/2. Deduce that  $\mathbf{ex}(n,T) \leq (k-1)n$  for every tree T with k vertices.
- 6. Let  $T_1, \ldots, T_k$  be subtrees of a tree T, any two of which have at least one vertex in common. Prove that there is a vertex in all the  $T_i$ .
- 7. Let  $R_r(3)$  denote the r-colour Ramsey number of a triangle. Show that

$$2^r \leqslant R_r(3) \leqslant 3 \cdot r!$$

Show moreover that  $R_r(3) \ge 5^{r/2}$ .

8. Recall that  $\alpha(G)$  denotes the size of the largest independent set in G. Show that, for every graph G,

$$\alpha(G) \geqslant \sum_{v \in V(G)} \frac{1}{d(v) + 1}.$$

9. Let C(s) be the smallest n such that every connected graph on n vertices has, as an induced subgraph, either a complete graph  $K_s$ , a star  $K_{1,s}$  or a path  $P_s$  of length s.

Show that  $C(s) \leq R(s)^s$ , where R(s) is the Ramsey number of s.

10. Let G be a (not necessarily planar) graph with |G| = n and e(G) = m. Suppose that G is drawn in the plane, but with edges allowed to cross. Let t be the number of pairs of edges which cross. Show that  $t \ge m - 3n + 6$ .

Suppose now  $m \ge 4n$ . By considering a random set  $W \subset V(G)$  containing each vertex of G independently with probability 4n/m, show that in fact  $t \ge m^3/64n^2$ .

11. Show that there is an infinite set S of positive integers such that the sum of any two distinct elements of S has an even number of distinct prime factors.
